Mod shapes: HackinTosh Build

Building the HackinTosh.  In which Sydney Shackelford shows me how to build a PC out of components.  We later installed OSx on this machine and that became my main computer.

Its a sexy little beast, and I do love it.    Its been ripping through 3d modeling projects, rendering, and delicious CAD/CAM operations.   Writing software is not any faster - which is how the machine is used during work days throughout the week.   However - video editing projects and anything that needs a GPU are so much faster than with  the macbook pro.
